Amendments to the Specification:

Please replace the paragraph beginning at page 11, line 15, with the following rewritten paragraph:

> In response to the input at block 103, the chair system 10 may begin to sequence through, or ramp to the ~~the to~~ final level of the reference voltage at block 105 according to the acceleration profile. Of note, different movable parts of a support surface may have different acceleration profiles. For instance, a foot support 22 may accelerate at a faster rate than a head support 21 for comfort considerations.
